

Worksheet

Linking Human Mobility to the Sustainable Development Goals and Public Policies

SDG target

For this exercise, you need a good understanding of the *Mobility Mandala* framework elaborated in Naujoks (2019) that explains the four domains linking migration, displacement and sustainable development.

- Select one target from each of the select targets for Sustainable Development Goals 4, 8, and 16 fill out one worksheet for each of the targets you chose. Thus, in the end, you will have three worksheets.
- In each worksheet, write down how the chosen target relates to each of the four mobility mandala domains. These are (1) development affecting mobility, (2) migration as development, (3) mobile populations as vulnerable populations; and (4) mobile populations as contributors to development.

This may require coming up with some information on scenarios in which this relationship would matter (e.g., what size and socio-economic characteristics of diaspora populations do you assume when you say that they can contribute to a certain SDG target? What are the specific vulnerabilities, needs and capabilities of the refugee, IDP, or immigrant population that makes you highlight a certain SDG target?)

- The Government of Globalia has asked you to provide suggestions on how to integrate migration and displacement into its policy agenda. Based on the scenario(s) and relationship you described in the previous point, write down ideas for policy and programming interventions that could be devised to affect this relationship. Highlight what information would be needed to devise and implement such programs, what challenges you foresee in this regard and what is the ‘theory of change,’ that is, the logical steps that lead from specific policy and programming activities to the desired outcome.

Domain 1: Development affects migration

Describe the link between the SDG target and human mobility, as well as the underlying scenario(s) in which this link is relevant

(Many different scenarios are possible. Try to imagine one that is of interest to you or that is based on your previous experiences.)

Who/what affects	Who/What affected
Immigrant/immigration (IM), refugee (R), IDP, returnee (Ret), emigrant/emigration (EM), diaspora (Dia), Community of Origin (CoO), Community of Destination (CoD)	

Short description and scenario:

What public policies and programming can be devised to address the above relationship?

- a. Describe the policy and programming options:

- b. What is the 'theory of change,' that is, the logical steps that lead from the policy and programming activities to the desired outcome?

- c. What information would be needed to devise and implement such programs and what challenges for the implementation do you anticipate?

Domain 2: Migration as development

Describe the link between the SDG target and human mobility, as well as the underlying scenario(s) in which this link is relevant

(Many different scenarios are possible. Try to imagine one that is of interest to you or that is based on your previous experiences.)

Who/what affects	Who/What affected
Immigrant/immigration (IM), refugee (R), IDP, returnee (Ret), emigrant/emigration (EM), diaspora (Dia), Community of Origin (CoO), Community of Destination (CoD)	

Short description and scenario:

What public policies and programming can be devised to address the above relationship?

a. Describe the policy and programming options:

b. What is the 'theory of change,' that is, the logical steps that lead from the policy and programming activities to the desired outcome?

a. What information would be needed to devise and implement such programs and what challenges for the implementation do you anticipate?

Domain 3: Mobile populations as vulnerable populations

Describe the link between the SDG target and human mobility, as well as the underlying scenario(s) in which this link is relevant

(Many different scenarios are possible. Try to imagine one that is of interest to you or that is based on your previous experiences.)

Who/what affects	Who/What affected
Immigrant/immigration (IM), refugee (R), IDP, returnee (Ret), emigrant/emigration (EM), diaspora (Dia), Community of Origin (CoO), Community of Destination (CoD)	

Short description and scenario:

What public policies and programming can be devised to address the above relationship?

a. Describe the policy and programming options:

a. What is the ‘theory of change,’ that is, the logical steps that lead from the policy and programming activities to the desired outcome?

b. What information would be needed to devise and implement such programs and what challenges for the implementation do you anticipate?

Domain 4: Migrants impacts development (migrants as contributors/harm)

Describe the link between the SDG target and human mobility, as well as the underlying scenario(s) in which this link is relevant

(Many different scenarios are possible. Try to imagine one that is of interest to you or that is based on your previous experiences.)

Who/what affects	Who/What affected
Immigrant/immigration (IM), refugee (R), IDP, returnee (Ret), emigrant/emigration (EM), diaspora (Dia), Community of Origin (CoO), Community of Destination (CoD)	

Short description and scenario:

What public policies and programming can be devised to address the above relationship?

- a. Describe the policy and programming options:

- b. What is the ‘theory of change,’ that is, the logical steps that lead from the policy and programming activities to the desired outcome?

- c. What information would be needed to devise and implement such programs and what challenges for the implementation do you anticipate?
