Fighting malaria with spermless mosquitoes

[Flaminia Catteruccia](#), a molecular entomologist and new associate professor of immunology and infectious diseases at HSPH, wants to learn everything she can about the reproductive biology of mosquitoes. Her goal is to develop novel methods for mosquito

control to reduce the incidence of mosquito-borne malaria, which kills roughly one million people each year and for which no vaccine is yet available. It's a crucial goal, given that mosquitoes are increasingly resistant to insecticides.

Daily multivitamin is good nutrition insurance policy

A healthy diet should provide nearly all the nutrients you need. But many people don't eat the healthiest of diets. That's why a multivitamin can help fill in the gaps, and may have added health benefits. [Read more](#)

Scientists uncover evidence on how drug-resistant TB cells form

A new study led by HSPH researchers provides a novel explanation as to why some tuberculosis cells are inherently more difficult to treat with antibiotics.

The discovery, which showed that the ways mycobacteria cells divide and grow determine their susceptibility to treatment with drugs, could lead to new avenues of drug development that better target tuberculosis cells. [Read more](#)
