

# District decision-making for health in low-income settings: **Data-Informed Platform For Health** a feasibility study from India, Nigeria and Ethiopia

**Dr. Bilal Avan**

London School of Hygiene and Tropical Medicine

LONDON  
SCHOOL of  
HYGIENE  
& TROPICAL  
MEDICINE

# Outline

1. Data Informed Platform for Health
2. Conduct of feasibility study
3. Lessons learnt from the feasibility studies
4. Next steps

LONDON  
SCHOOL of  
HYGIENE  
& TROPICAL  
MEDICINE

# Background

- Low-resource settings often have limited use of local data for health system planning and decision-making for MNCH services.

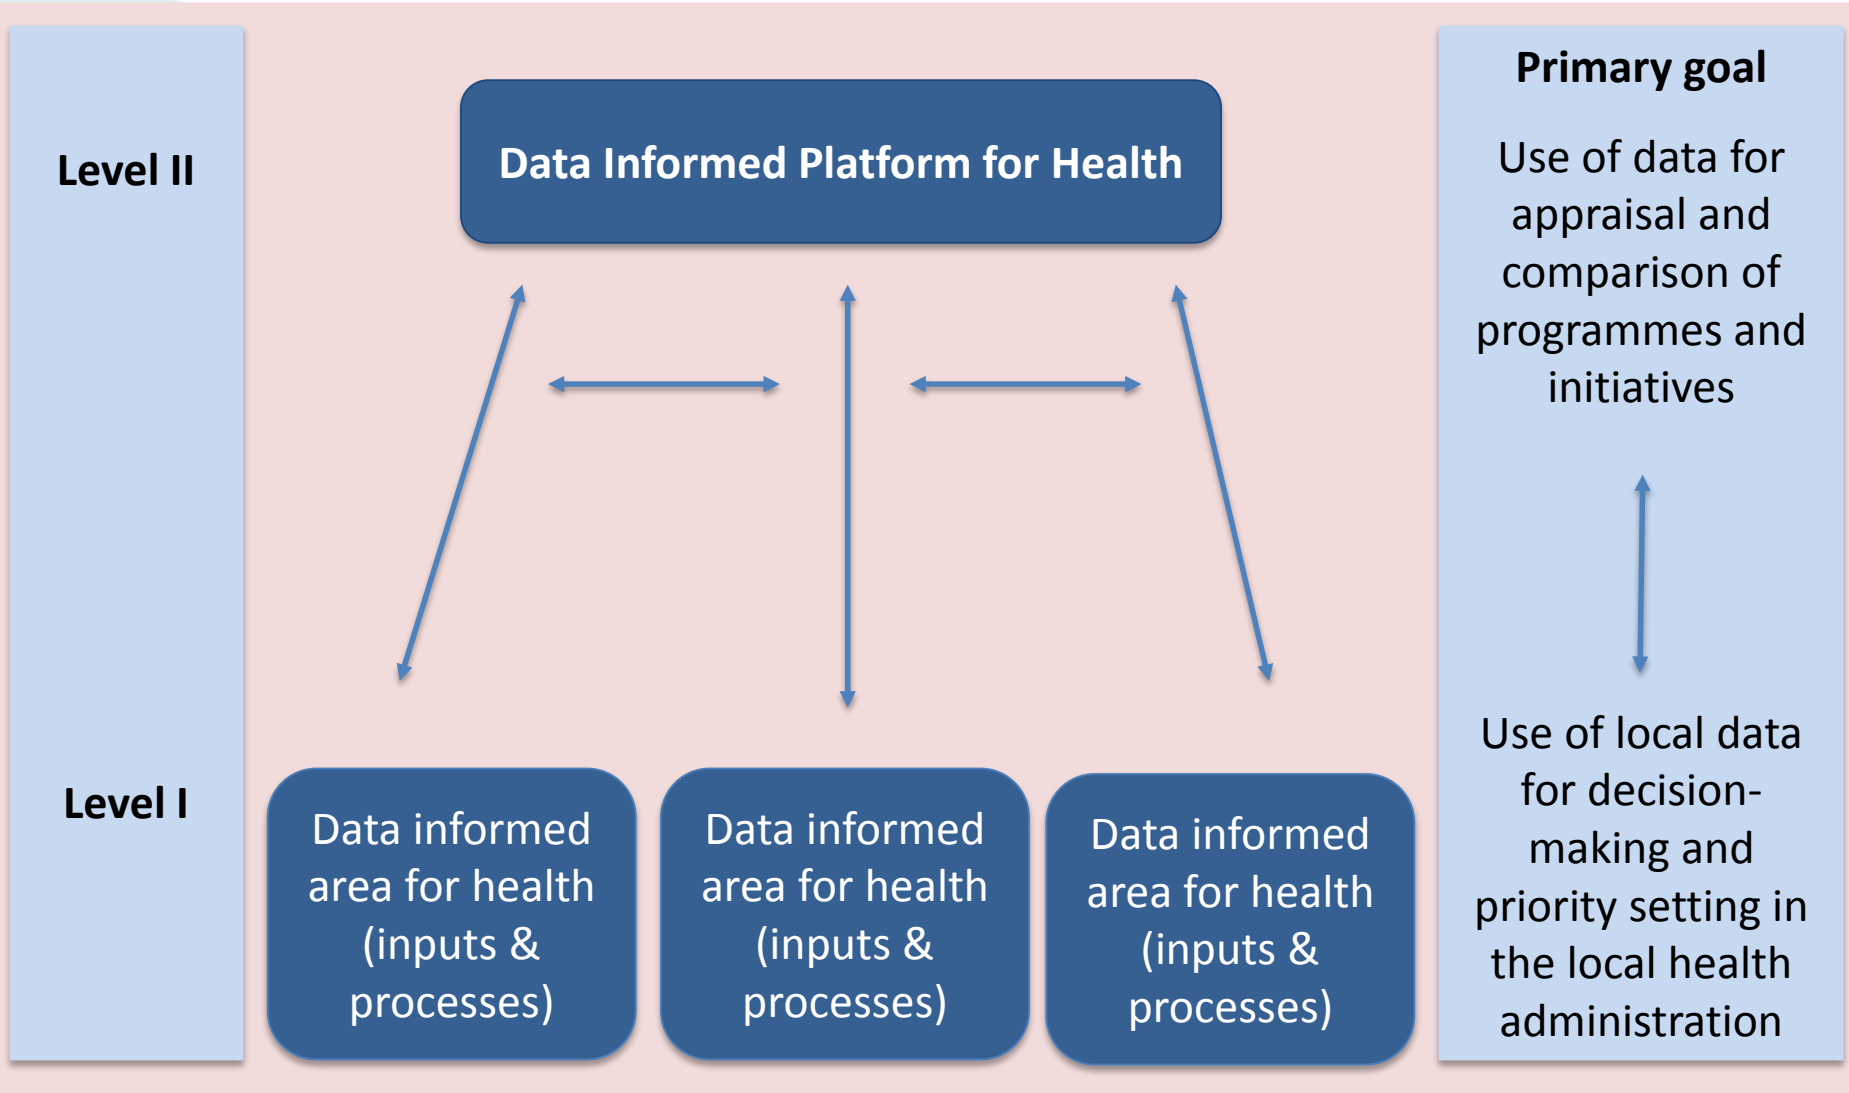

- **Key challenges**

- Data quality
- Professional expertise
- Information-system infrastructure
- Robustness of technology
- Culture of evidence-based decision-making
- Health system responsiveness

- One of the possible solution: **Data Informed Platform for Health**

# Generic Structure: Data Informed Platform for Health

**Level I:** Primary geographical unit e.g. districts

**Level II:** Secondary geographical unit e.g. province, state, region or zone

# Data Informed Platform for Health

- District as a unit of implementation
- Bringing together diverse public sector services influencing MNCH health
- Role of private sector and NGOs
- District-level databases, potentially linked at regional or federal level
- Implementation research challenge

# DIPH feasibility study: India, Ethiopia and Nigeria

## Overall aim

To determine whether DIPH approach is technically feasible to implement

*Focus: MNH related services offered by public health system and key organisations*

LONDON  
SCHOOL of  
HYGIENE  
& TROPICAL  
MEDICINE

# Feasibility study

## TELOS framework

**Greek philosophy of teleology:** the study of the nature or intentions of a plan or object.

The concept is used in business and management to assess the feasibility of a new service, programme or initiative.

## Five dimensions of feasibility research:

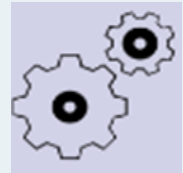

- Technology and Systems,
- Economic,
- Legal and Political,
- Operational, and
- Scheduling feasibility.

LONDON  
SCHOOL of  
HYGIENE  
& TROPICAL  
MEDICINE

# TELOS framework: nature of inquiry

	<b>Technology and System Feasibility</b>	<ul style="list-style-type: none"><li>• Do stakeholders have the expertise needed?</li><li>• Are additional resources needed in the health system including infrastructure, skills-sets or job aids?</li><li>• Is the health system ready in terms of the technology required?</li></ul>
	<b>Economic Feasibility</b>	<ul style="list-style-type: none"><li>• Do the resources needed exist?</li><li>• Will the proposed health service or initiative lead to better use of resources to improve health outcomes, when compared with other options?</li></ul>
	<b>Legal and Political Feasibility</b>	<ul style="list-style-type: none"><li>• Are rules and regulations in place to enable stakeholders to support the new service or initiative?</li><li>• Does the essential political will exist?</li><li>• Is there a legal framework to engage with the private sector or other key service providers?</li></ul>
	<b>Operational Feasibility</b>	<ul style="list-style-type: none"><li>• Do existing health system procedures and protocols support the new service or initiative?</li><li>• How will key collaborators be involved?</li></ul>
	<b>Schedule Feasibility</b>	<ul style="list-style-type: none"><li>• What are the prerequisites before the new service or initiative can begin?</li><li>• Is the service or initiative likely to be developed in time to be useful to the health system?</li></ul>

# Methodology

- **Context: India, Ethiopia and Nigeria**
- Collaborative effort with respective MoHs
- Selection of study districts
- **Data collection:**
  - In-depth field visit
  - Key informant interviews
  - Service-delivery staff interviews
  - Record and document review
- The readiness to implement DIPH is described on the basis of the relative status of the country according to the feasibility framework

LONDON  
SCHOOL of  
HYGIENE  
& TROPICAL  
MEDICINE

# Summary of findings

Components	Specific inquiries considered	India	Ethiopia	Nigeria
Technology and Systems	<ul style="list-style-type: none"> <li>Do stakeholders have the necessary background expertise needed for DIPH?</li> <li>Health system readiness in terms of necessary technology required?</li> </ul>	+++	+	-
Economic	<ul style="list-style-type: none"> <li>Do the resources needed for the DIPH exist?</li> </ul>	+++	±	±
Legal and Political	<ul style="list-style-type: none"> <li>Are the necessary rules and regulations in place to enable the stakeholders to support the new health system service or new initiative?</li> <li>Does the essential political-will exist to support the DIPH?</li> </ul>	+++	++	±
Operational	<ul style="list-style-type: none"> <li>Do the existing procedures and protocol of health system support the DIPH?</li> </ul>	+++	+	++
Schedule	<ul style="list-style-type: none"> <li>What prerequisites need to be in place prior to the execution of the DIPH?</li> </ul>	+++	++	±

+++ = sufficient, ++ = basic minimum, + = limited, ± = negligible, - = nil

# Findings and lessons learnt

## *Potential challenges*

- Utility perspective for the health systems
- Embedding in the health system
- Private sector placement
- Technical capacity building
- Standardisation of decision-making processes
- Network architecture across different levels
- Organisational barriers among public, NGO and private sector
- Data harmonisation
- Performance evaluation

## *Opportunities - related ongoing initiatives in the country*

- M-health
- Score cards on performances

LONDON  
SCHOOL of  
HYGIENE  
& TROPICAL  
MEDICINE

# Next steps

- **Pilot study**
  - To build upon the evidence of decision-making at the district level
  - Strategies to support readiness and acceptance of private sector
  - Streamlining the district level leadership and health system governance
- **Scaling up of DIPH in the context of key MNCH interventions and innovations**

# Current district decision-making process

PUBLIC HEALTH FOUNDATION OF INDIA

LONDON SCHOOL of HYGIENE & TROPICAL MEDICINE

# District decision-making: India

## Objective:

- To explore district decision-making structure
- To understand use of data for planning and resource allocation

## Study Area:

- North and South 24 Parganas districts in West Bengal State

## Methods:

- In-depth interviews with 28 representatives of district decision-making body in India.
- Observation of 4 district decision-making meetings in India

PUBLIC  
HEALTH  
FOUNDATION  
OF INDIA

LONDON  
SCHOOL of  
HYGIENE  
& TROPICAL  
MEDICINE

# District decision-making: Structure

- Who?
- What?
- When?
- Representative?

*“**District Health Society** is a type of district level convergence meeting, where you get all the government officials... So the meeting can determine policy for different health activities like construction, health programmes, funding, budgeting, planning, analysing current health situation of district ...”*

**[Health department rep.]**

*As per guideline our department should participate in **District Health Society** meetings but practically they are not aware of importance, and the health department is also not taking initiative to motivate our participation ... Our role is ill-defined...”*

**[Non-health department rep.]**

PUBLIC  
HEALTH  
FOUNDATION  
OF INDIA

LONDON  
SCHOOL of  
HYGIENE  
& TROPICAL  
MEDICINE

# District decision-making: Process

- How?

*“We have to go by the priorities set by Government of India state government. Other suggestions from local political or community can be considered and discussed depending upon its usefulness...”*

**[Health department rep.]**

*“Funds are not released based on priorities set by us, rather priorities are set based on availability of funds”*

**[Health department rep.]**

- However...

*“District Health Society only plans for health department.... mostly health department decisions are prioritised at the meeting”*

**[Non-health department rep.]**

PUBLIC  
HEALTH  
FOUNDATION  
OF INDIA

LONDON  
SCHOOL of  
HYGIENE  
& TROPICAL  
MEDICINE

# District decision-making: Observation on data use

For:

- Planning?

*“Enormous data is being collected, but remain unutilised due to lack of time and inadequate manpower. Data is a very interesting tool if we use it in a proper way”*

**[Health department rep.]**

*“Yes data is useful for planning. E.g Mission director when visited this hospital found bed occupancy rate at 130%. Then proposal of increasing beds in maternity ward from 85 to 120 was developed and put in District Health Society meeting”*

**[Health department rep.]**

- Fund allocation?

*“There is no such link between funding and data, in my personal opinion funding is very specific (state guideline) and never linked with data ...”*

**[Non-health department rep.]**

# Needs identified by stakeholders

District Health Society members identified the following three key needs in terms of current decision-making process:

1. Improve **coordination** between different departments for **knowledge interchange**
2. Increase **use of data** to identify problems and use for planning.
3. Develop a structured **decision-making tool** for District Health Society meetings.

# Study areas

- Sitapur and Unnao districts in Uttar Pradesh State

- Dendi district in Oromia region
- Basso district in Amhara region

PUBLIC HEALTH FOUNDATION OF INDIA

LONDON SCHOOL OF HYGIENE & TROPICAL MEDICINE

# Methods: Data collection

- **Visited** 8 public health facilities in each country
- **Collected** data forms from different public health system levels
- **Interviewed** individuals at the district level to understand data flow and data sharing

PUBLIC  
HEALTH  
FOUNDATION  
OF INDIA

LONDON  
SCHOOL of  
HYGIENE  
& TROPICAL  
MEDICINE

# Methods: Content analysis

## Data categorisation:

- Used Microsoft Access
- Categorised forms by level of completion and reporting frequency
- Identified and sorted thematic areas into the six WHO health system categories
- Each data element was then categorised into to a thematic area

## Content analysis:

- To see the type and amount of data available for different health system levels
- Further analysis to understand the MCH service delivery data

& TROPICAL  
MEDICINE

# Summary

## Content

- Information is available on all 6 categories in both countries
- In both countries a majority of the data is on service delivery
- Parsimony vs Diversity of forms (13 vs 210 forms)
- There is filtering of data from the community up
- Unlike in India, in Ethiopia district level collects additional data
- More data on neonates collected in India

## Technique

- A new way of looking at the available district level data
- It provides an objective and quantifiable perspective on what exists
- Allows optimisation of data utility

# Use of health data for decisions at the district level on maternal and newborn health in Northeast Nigeria

**Dr. Nasir Umar**

**London School of Hygiene & Tropical Medicine**

**Improving health worldwide**

[ideas.lshtm.ac.uk](http://ideas.lshtm.ac.uk)

LONDON  
SCHOOL of  
HYGIENE  
& TROPICAL  
MEDICINE

# Background: Three-tier system of government

## Federal:

- ✓ Set strategic decisions or policy goals; resource mobilisation & distribution to attain set goals

## State:

- ✓ Oversee the adoption or adaption of national health policies at the state and LGAs

## LGAs:

- ✓ Decisions on the provision of primary health care

# Study setting: Gombe state

- ✓ Located in the North-East region of Nigeria; estimated population of 2.8 million
- ✓ Multi-ethnic and comprises 11 LGAs
- ✓ About 75% of the state is rural

# Study setting: Shongom LGA

- ✓ Estimated population of 151,520
- ✓ Purposefully selected

# Methodology: Data collection

- ✓ In-depth interviews about the generation of maternal & newborn health data and use of data collected to improve maternal & newborn care
- ✓ Key informants: drawn in collaborations with state ministry of health, state ministry for local government affairs, primary health care department of the LGA
- ✓ Interviewees: health administrators, decision-makers, health workers
- ✓ 21 of the 30 interviewees approached agreed to participate (June–December 2012, follow up May –June 2013)

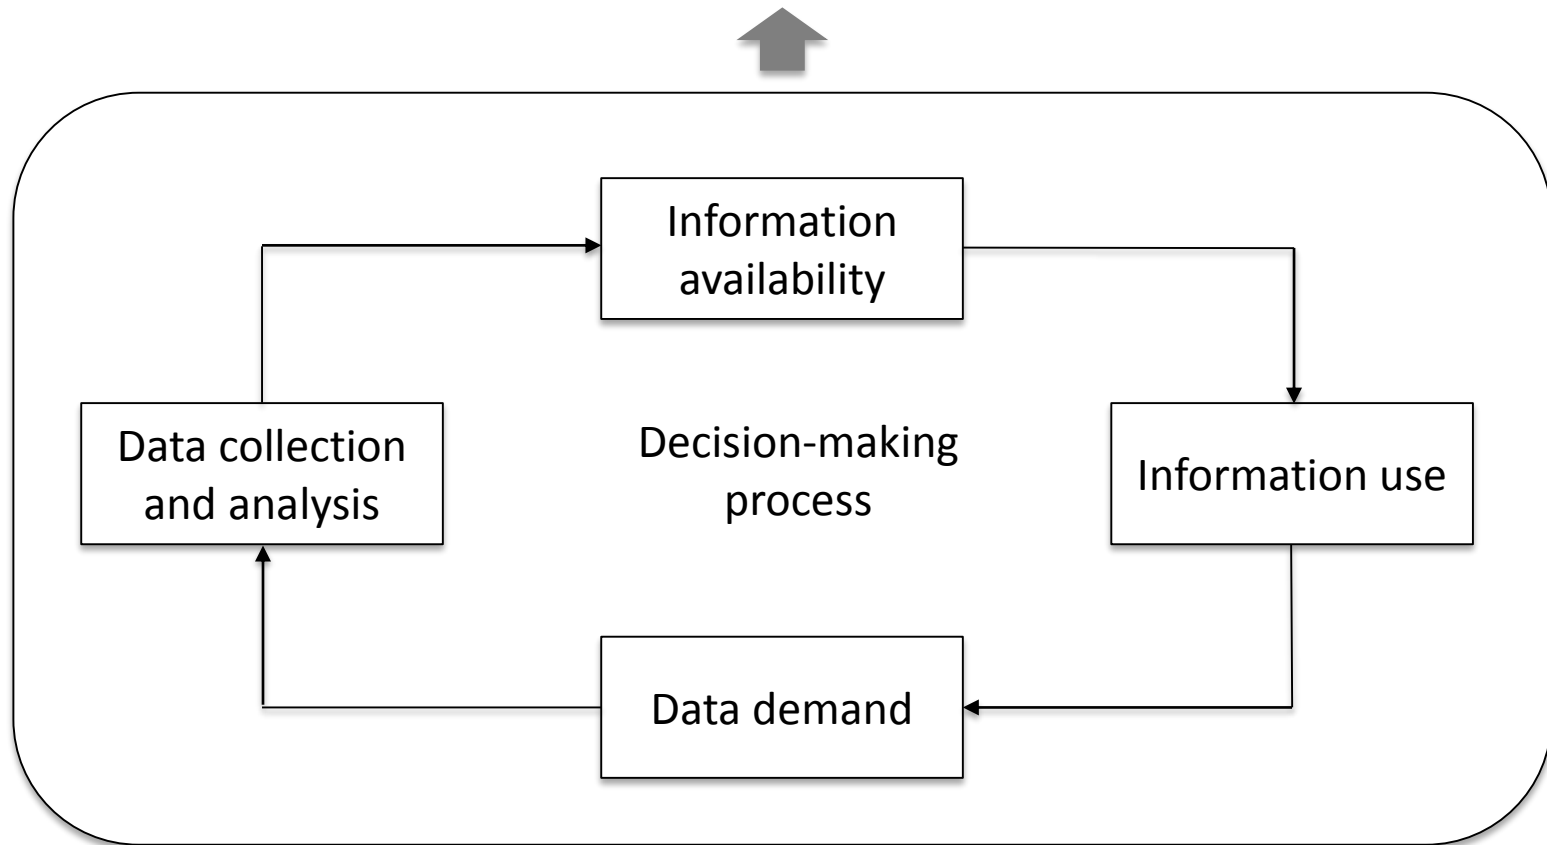

LONDON  
SCHOOL of  
HYGIENE  
& TROPICAL  
MEDICINE

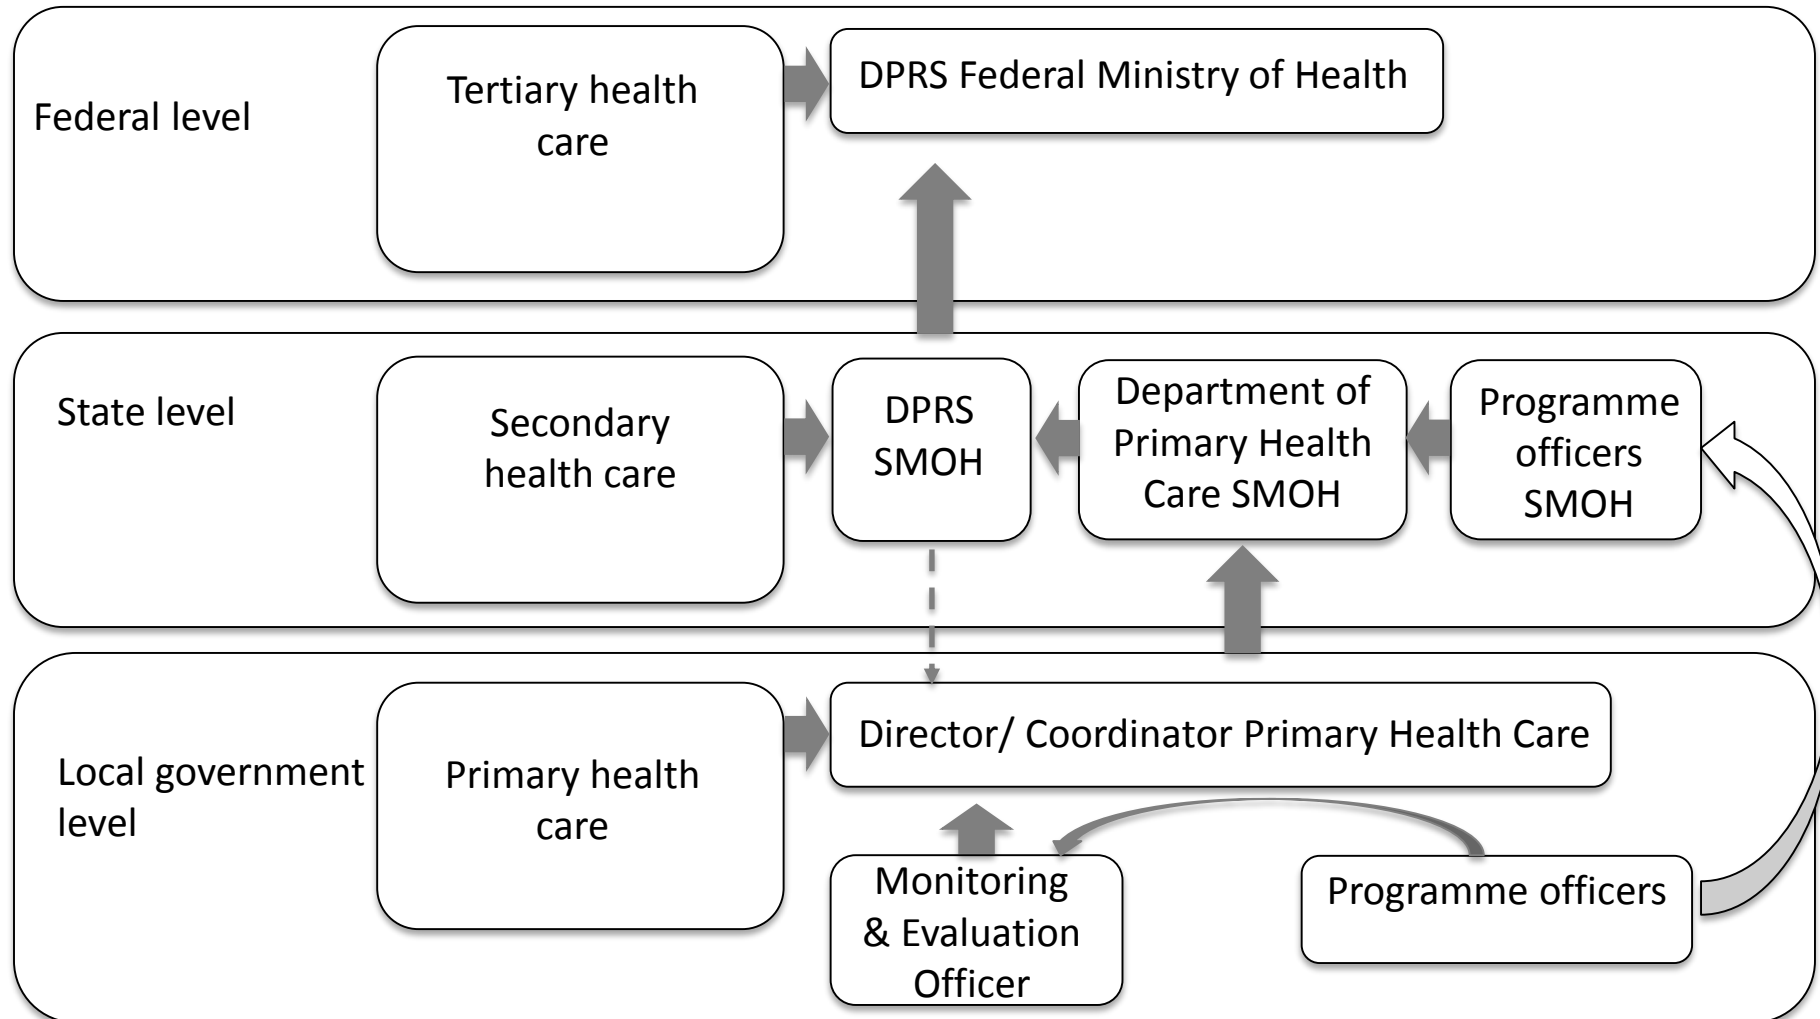

# Methods: Data analysis framework

**Improved health decisions**

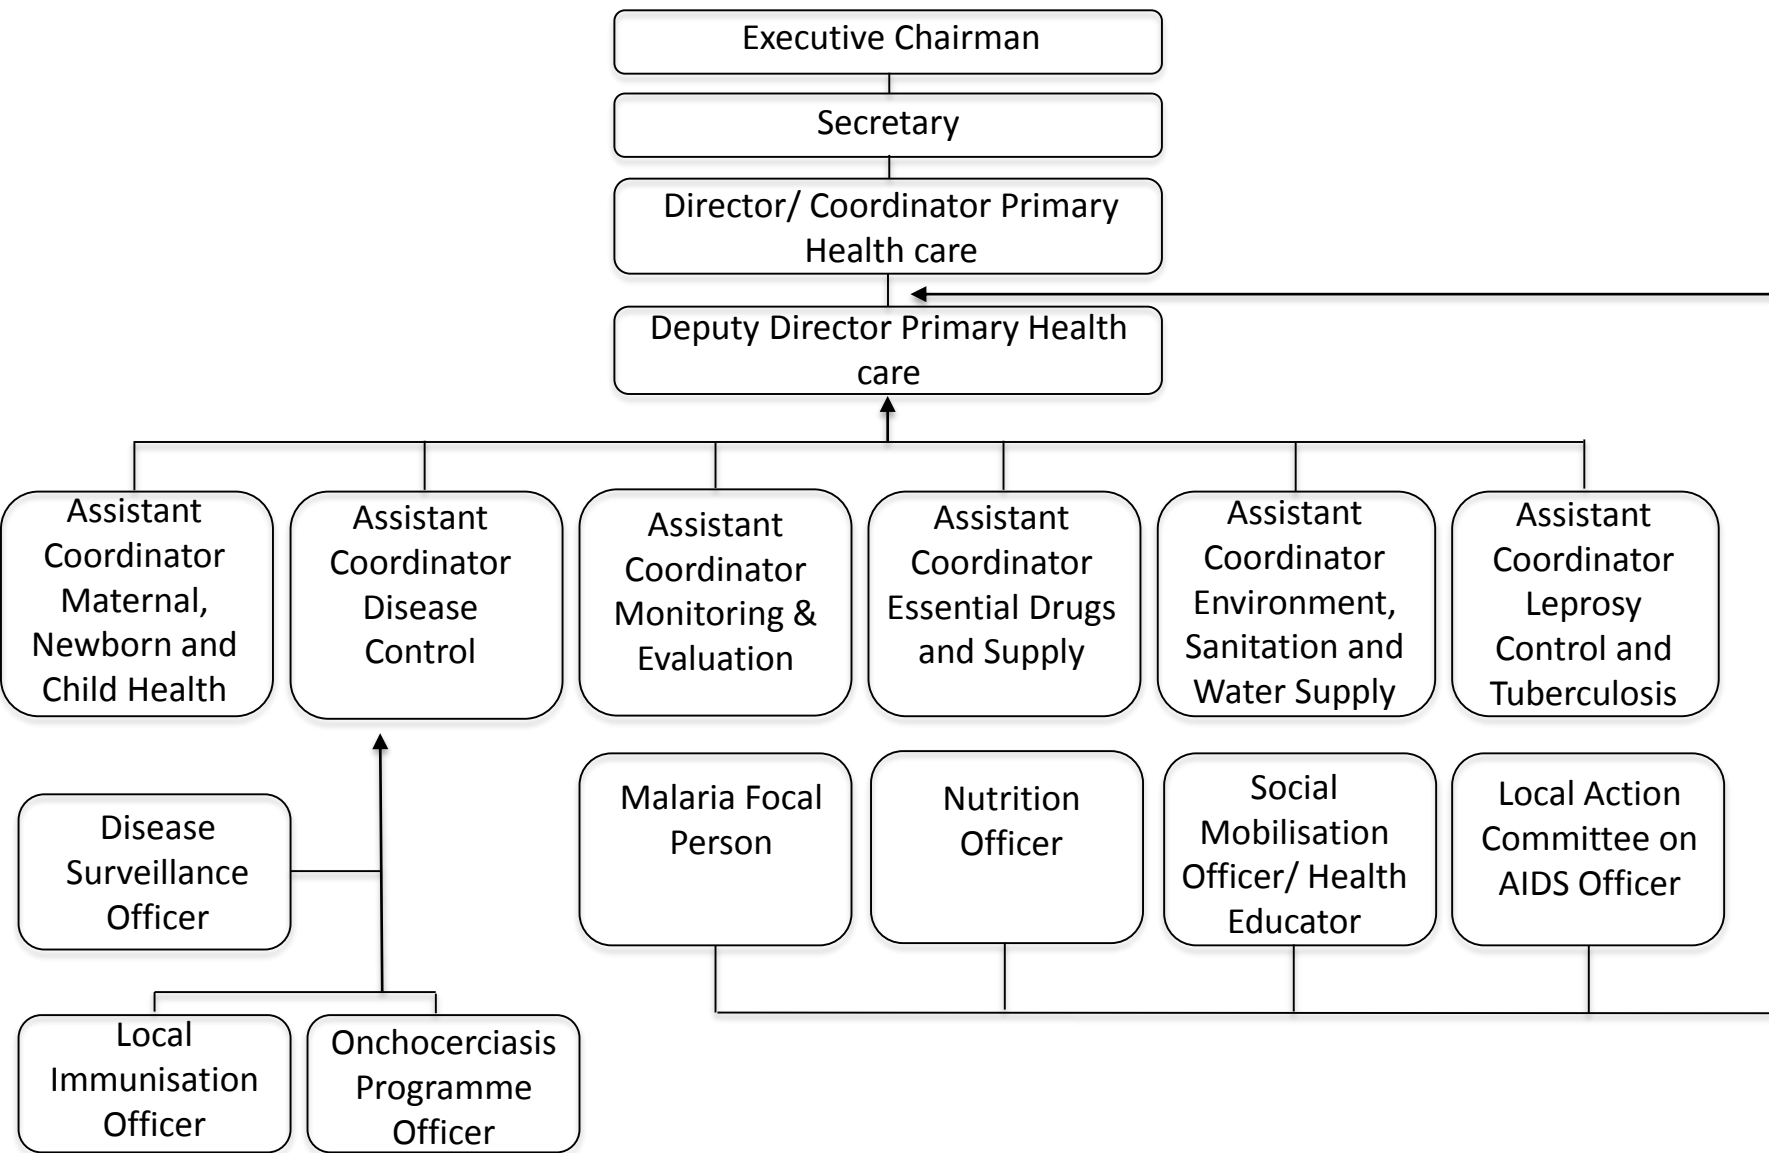

**Improved accountability**

# Findings: Data collection, analysis & health information availability for MNH

DPRS: Department of Planning, Research & Statistics  
 SMOH: State Ministry of Health

# Findings: Use of health information & data demand for MNH

# General findings

- **Data collection & analysis**

- ✓ Limited skills of local government area staff to process and use health information

- **Information availability**

- ✓ Limited access to health information by decision makers

- **Information use**

- ✓ Inappropriate health information supplied to decision makers

- **Data demand**

- ✓ Lack of funds for regular data management activities
- ✓ Insufficient organisational support to demand, process and use health information
- ✓ Limited interaction between data producers and data users

# Conclusions

Limited use of health data for decisions to improve maternal & newborn health at the LGA level in Shongom LGA

Created by Nicholas Menghini from Noun Project

# New developments

- **Primary Health Care Under One Roof**
  - ✓ One management body
  - ✓ One plan
  - ✓ One monitoring & evaluation
- **New national Health Act**
  - ✓ Linked budget earmarked for health
- **Decentralisation of power/direct funding to LGAs**
- **Improving security**

**Thank you very much for listening**

# IDEAS private sector study of MNCH data sharing in Uttar Pradesh and West Bengal, India

**Meenakshi Gautham, IDEAS-LSHTM**  
**Neil Spicer, IDEAS-LSHTM**  
**Manish Subharwal, IMPACT**  
**Sanjay Gupta, IMPACT**  
**Nirmala Mishra, PHFI**

# Private sector: important service provider but limited role in public health planning or data sharing

## UTTAR PRADESH (UP)

	Government source	Private Source	Total
Institutional deliveries	39%	17.6%	56.7%
Care seeking for an acute illness (fever, diarrhoea etc)	5.4%	92%	97.4%
Regular treatment for a chronic illness (TB, asthma, hypertension, diabetes)	15.6%	43.1%	58.7%

Source: Annual Health Survey, Uttar Pradesh, 2012-13

MEDICINE

# Difficulties in estimation of institutional deliveries without complete data

## WEST BENGAL

Institutional deliveries	North 24 Parganas	South 24 Parganas
Total reported institutional deliveries (to total annual <i>estimated</i> deliveries)	18.7%	28.9%
Total reported institutional deliveries (to total <i>reported</i> deliveries)	88.8%	61.5%

Source: NRHM Factsheet based on district HMIS Apr-Sept 2014

# Study objectives

1. Determine the composition and role of the private health sector in MNCH services (institutional deliveries, newborn care, immunisation, family planning)
2. Assess the status of MNCH data sharing by the private sector at the district level
3. Identify the barriers and enablers to data sharing

UP: Hardoi and Allahabad districts

West Bengal: North and South 24 Parganas

LONDON  
SCHOOL of  
HYGIENE  
& TROPICAL  
MEDICINE

# Qualitative study

## Key informant Interviews

Uttar Pradesh: 54 interviews

West Bengal: 36 interviews

Secondary data sources:  
district level routine data

LONDON  
SCHOOL of  
HYGIENE  
& TROPICAL  
MEDICINE

# Private facilities: features

Outnumber public facilities 2:1

Licensed and unlicensed

Bed strength : 5 to 500

Public private partnerships

# Good data sharing for legislated services and PPPs, but not other services

## Standardised and regular data sharing:

- Ultrasound services
- Medical termination of pregnancy
- Institutional deliveries by Community delivery centres
- Caesarean and normal deliveries by Ayushmati centres
- Online registration by private facilities in West Bengal

## Varying and irregular data sharing:

- By all other private for profit facilities, although most maintain basic data

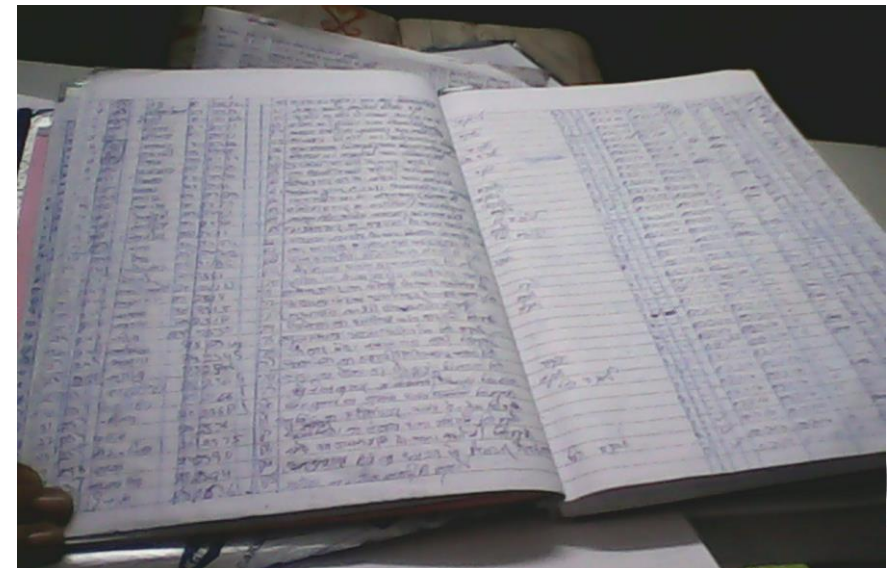

## No data sharing:

- By private unlicensed facilities

# Factors affecting routine MNCH data sharing

# Conclusions

- Private sector data is necessary for monitoring health services and outcomes
- Legislation is important but not the only prerequisite for public private data sharing
- Public health departments need to perceive value for data and develop data systems and utilisation mechanisms
- Private sector willingness to share public health data and also for other health engagements needs to be harnessed

LONDON  
SCHOOL of  
HYGIENE  
& TROPICAL  
MEDICINE

# Summary

- The 'Data-Informed Platform for Health' introduces a data-based, structured decision-making process at district level
- Literature review shows examples of good practice, but no guideline for decision-making at district level
- Health ministry staff and other stakeholders are receptive
- Private sector (India) shows willingness to participate
- At district level, many health data are available but streamlining is needed
- Feasibility in Nigeria, Ethiopia and India
  - Challenging, need to adapt to context
  - Pilot work ongoing in India
